

Training Media Review gives RapideL strong rating (Apr 9)

Pune, India — April 9

Training Media Review (TMR), an online service that provides Independent reviews of media-based training technology, has given RapideL Enhance a 3.5-star rating, higher than most of the other competing products.

After being rated by Kineo as "one of the fastest e-learning development tools in the market," RapideL Enhance has earned itself a 3.5-star rating from Training Media Review.

After a month-long, in-depth review, TMR recently released its recommendation for RapideL Enhance.

"I give the RapideL authoring tool a strong buy recommendation for learning organizations in which most of the core content is built by subject-matter experts," the review states. "Because the courseware templates incorporate sound instructional design principles, content developers without any formal instructional systems design know-how can consistently create good learning materials."

RapideL Enhance, referred to as an efficient and effective design and development tool, also has been praised for its ease of use, its detailed help and its online review mechanism.

The use of templates has been recommended as a sensible option where consistency of the course is a business requirement.

RapideL, the rapid e-learning suite developed by Brainvisa, consists of two products: Enhance 3.1 and Discover 1.0.

The RapideL technology enables instructional designers and subject-matter experts to develop content in the basic Word authoring interface and create engaging eLearning courses in Flash.

Brainvisa's RapideL is also enabled with support for language localization and supports up to 22 languages.
